Pharmacies listed with a Fax icon indicate these pharmacies are not currently enabled to receive eSIGs. Transmitting an eSIG to these pharmacies will result in a 14 cent fax charge from SureScripts. Fortunately, these records are easily identified when prescribing medications and you can fax these prescriptions using your current Pulse Fax Server or print the prescriptions manually to avoid this charge.

The details display for the manually entered pharmacy with the type of Retail, No NCPDP, and a Source of PulsePro.

If the NCPDP ID of the pharmacy is saved to a PulsePro Source pharmacy, the eRX module will recognize if that pharmacy is already in the eRX network based off this ID# and the module will utilize the record from the eRX Network pharmacy to transmit the prescription instead of the PulsePro source pharmacy. Click anywhere to continue.
